...

Linear distribution of points

The principle of linear distribution is the following if 100 point are distributed between 10 players

- 1° = 100
- 2° = 90
- 3° = 80
- 4° = 70
- 5° = 60
- 6° = 50
- 7° = 40
- 8° = 30
- 9° = 20
- 10° = 10

Tier A System

500 points linearly distributed between all players 300 points linearly distributed between half of players (rounded up) 200 points linearly distributed between 25% of the players (rounded up) 10X N° BOARDS (capped to 30 boards) linearly distributed between the 7 first ranked players 5x N° players (capped to 75 players) linearly distributed between the podium

Tier B System

500 points linearly distributed between all players 300 points linearly distributed between half of players (rounded up) 200 points linearly distributed between 25% of the players (rounded up) 5X N° BOARDS (capped to 15 boards) linearly distributed between the 7 first ranked players 2x N° players (capped to 30 players) linearly distributed between the podium

Referee attributed points

the referee is automatically considered as the last one and thereafter 300 is substituted to the calculated points

Final Ranking

- Top 3 results 100%
- result 4 & 5 50%
- every other result 10%
